LENGTH OF BAR

The length of your bar should be at the very least, double the length of your door. Double + 5 cm would be better.

We have 1.5, 2.0 & 2.5m bars available. Our 1.5 bars can be connected to form 3.0m bars.

A standard door should be .70 - .80m in length.

If you are not sure about what bar length you need, please contact us.

LOCKS

We have some lock options at the website. The privacy locks, latches and others are available for you to choose from.

It is our recommendation however, to add more wheels if the door is very big. This will give additional support, as well as a more balanced look in terms of the wheel / door size proportion.

For doors that are lighter or made with lightweight material, please check our Economy Series.

DOOR THICKNESS

Recommended door thickness is 35-45mm. For thicker doors, some parts of the set would have to be replaced. Please contact us to check if the parts are available.

MATERIAL

Made of carbon steel, powder coated finish. for black & white sets, electroplated for other colors.

STANDARD SET COMPONENTS

- 1 pc. Barn door track (2.0 meters)
- 2 pcs. anti-jump accessories
- 2 door stoppers
- 1 door guide (T-guide)
- Fittings - Nuts, bolts

BYPASS SYSTEM

The bypass system is used when the space is very limited for 2 doors, and usually there is no space on either side of the bar where the door can land. You simply purchase our bypass brackets to avail of this system.
